Industrial Visit Report

(TAL Manufacturing Solutions Limited, Nagpur)

Industrial visit was organized for V and VII semester Electrical Engineering Students of P. R. Pote (Patil) College of Engineering and Management Amravati, on 27/09/2019 at TAL Manufacturing Solutions Limited Aerospace Business Unit, Sector 3, MIHAN SEZ, Nagpur. TAL was established in the year 2000 in Nagpur to manufacture Automotive, Heavy Engineering and composites for aerospace. It has 19 years of experience of manufacturing the Automotive and Heavy Engineering components.

This Industrial visit helped the students to grasp the practical knowledge related with Manufacturing Process and Automation in Production subject. Safety Engineer explained about various sections of the Industry to a batch of 25 students. College Bus left the campus for visit at 01:00 PM and return at 4:30 PM. They explained and given valuable information about various sections of Industry in which the major section is Boeing.

In the Nagpur facility of TAL they produce the beam for the aircraft. They told us how the that beam is produced and the duration for the production of one beam is 2 months. The production cost of each beam is 2 Lakhs. The composite material form which the beam to be made is preserve at the specified temperature and humidity. As the tolerance rate is negligible for the beam they use full body cover for the zero error in the weight of the beam. For making the beam in solid form they bake the beam at very high temperature in the furnace at a time 24

Visit at Area Load Dispatch Center, Ambazari

The department of Electrical Engineering, P.R. Pote college of Engineering and Management, Amravati had organized a one-day Industrial visit to "Area Load Dispatch Centre (ALDC), Ambazari, Wadi, Nagpur" on 27th September, 2019. There were 27 students from B.E-7th semester along with two teaching faculties Prof. J.B. Mokalakar and Prof. P.M. Mankar.

We had coordinated with Mr. Niranjana Dalal, Additional Executive Engineer. At 1 p.m., we reached at ALDC, Ambazari. After reaching there, Mr. Niranjana Dalal received us with a warm welcome. He had explained the role of ALDC in operation and control of power system network in depth. Then we were taken to the control room. In the control room, we observed the real time data of MSLDC on the screen.

Mr. Rupesh Palsate had explained us how they are monitoring power system network in control room in detail and also shown us the networks of 765 kV & 400 kV of Maharashtra. He had conveyed very useful information regarding MSLDC website and explained different aspects like how to Maintain system frequency in 49.7 Hz to 50.2 Hz range, Outage planning and monitoring, Load Shedding implementation.

Fig. Area Load Dispatch Center, Ambazari.

Functions of Area Load Dispatch Center:

- (1) The Area Load Dispatch Centre shall be the apex body to ensure integrated operation of the power system in an Area.
- (2) The Area Load Dispatch Centre shall—
 - (i) Be responsible for optimum scheduling and dispatch of electricity within an area,
 - (ii) Monitor grid operations.
 - (iii) Keep accounts of the quantity of electricity transmitted through the area grid.
 - (iv) Be responsible for carrying out real time operations for grid control and dispatch of electricity within the Area.

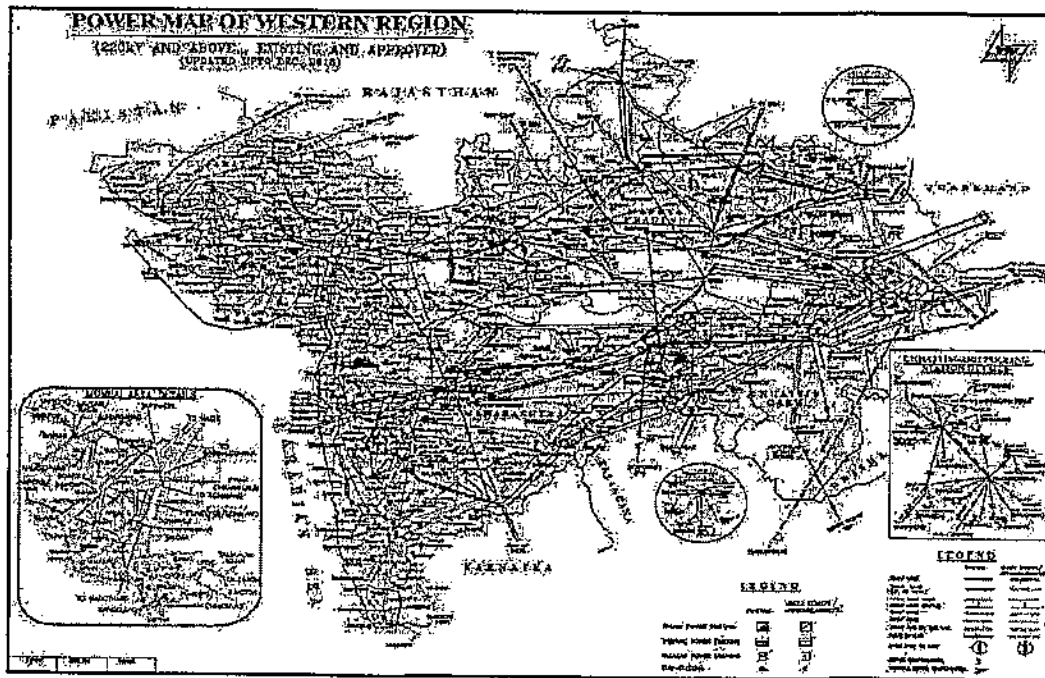

Fig. Power network of Maharashtra

- **Scheduled generation:** At any time or for a time block or any period means schedule of generation in MW or MWh ex-bus given by the concerned Load Dispatch Centre.
- **Scheduled drawl:** At any time or for a time block or any period time block means schedule of dispatch in MW or MWh ex-bus given by the concerned Load Dispatch Centre.

• **Time-block:** A time block of 15 minutes, for which specified electrical parameters and quantities are recorded by special energy meter, with first time block starting at 00.00 hrs.

• **About UI rate:** The charges for the Unscheduled Interchanges for all the time blocks shall be payable for over drawl by the buyer or the beneficiary and under-injection by the generating station or the seller and receivable for under-drawl by the buyer or the beneficiary and over-injection by the generating station or the seller and shall be worked out on the average frequency of a time-block at the rates specified in the Schedule.

• Ultimately, UI rate is a part of ABT (availability based tariff). It means that if there is a change in drawl and scheduled quantity of an entity, it needs to pay in form of money.

• **Advantages of UI mechanism:**

- UI is a real time pricing mechanism
- UI can be used for Merit Order Dispatch
- UI increases efficiency of the grid.
- Capacity best matched with load by UI mechanism
- Implications of deviating from scheduled supply/drawl known.
- Improvement in grid parameters such as Frequency and Voltage.
- A mechanism for harnessing Captive & Co-generation.
- More consumer load can be catered at any time.
- UI prevents costly damage to electrical & mechanical equipment.

• **Improvements brought about by UI mechanism:**

- Grid frequency has drastically reduced from 48 to 52 Hz earlier to 49.5 to 50.5 Hz for most hours in a day.
- The hydro electric utilities are handled in an efficient manner than it was done before.
- States share have acquired a new meaning in the central generating stations and grid discipline is promoted.
- Power deficit states can meet their occasional excess demand by over drawing from the grid and paying the UI charges to the state which has under drawn.

We are very grateful to ALDC, MSLDC for giving us permission for this visit. Students got an opportunity to know regarding practical aspects about what they are learning in theory. We hope that such kind of permission will be given in future also. It was an informative, interesting and a successful visit. Some glimpse of visit is shown in form of picture

The Electrical Engineering Department organized Industrial Visit at 220 KV Substation, Nandgaon Peth on 29/02/2020 for Third year students. From this visit, students got the information and practical knowledge about Power Distribution and Transmission. Students got the knowledge about different protection devices used in substation. They got the idea how to read the single line diagram of Power Substation using different symbols used in diagram. Students cleared out practical knowledge of transformer as how it step down voltage 220 KV to 132 KV. They also got knowledge about new SCADA based system as you can operate substation by manually or by command from computer using SCADA system and PLC programming.

13) A and B can do a piece of work in 30 days, while B and C can do the same work in 24 days and C and A in 20 days. They all work together for 10 days when B and C leave. How many days more will A take to finish the work?

14) A works twice as fast as B. If B can complete a work in 12 days independently, the number of days in which A and B can together finish the work in :

15) A and B can do a work in 8 days, B and C can do the same work in 12 days. A, B and C together can finish it in 6 days. A and C together will do it in :

16) A can finish a work in 24 days, B in 9 days and C in 12 days. B and C start the work but are forced to leave after 3 days. The remaining work was done by A in:

17) X can do a piece of work in 40 days. He works at it for 8 days and then Y finished it in 16 days. How long will they together take to complete the work?

18) A and B together can complete a task in 20 days. B and C together can complete the same task in 30 days. A and C together can complete the same task in 30 days. What is the respective ratio of the number of days taken by A when completing the same task alone to the number of days taken by C when completing the same task alone?

19) Pipe A can fill a tank in 20 hours while pipe B alone can fill it in 30 hours and pipe C can empty the full tank in 40 hours. If all the pipes are opened together. how much time will be needed to make the tank full ?

20) Two pipes A and B can fill a tank in 24 minutes and 32 minutes respectively. If both the pipes are opened simultaneously, after how much time should B be closed so that the tank is full in 18 minutes ?

21) An outlet pipe can empty $\frac{2}{3}$ rd of a cistern in 12 minutes. In 8 minutes, what part of the cistern will be emptied ?

22) Two pipes A and B can fill in 27 minutes and 45 minutes respectively. A waste pipe C can empty the tank in 30 minutes. First pipes A and B are opened. After 9 minutes C is also Opened. In how much time will the tank be full?

23) A tank takes 15 minute to get filled up by a filling pipe, but takes 3 minutes extra due to a leak in the bottom. Find the time taken by the leak to empty the tank.

24) A cistern, when full, is emptied by a waste pipe in 30 min., but if a tap (filling source) is opened, it takes 40 min to empty the cistern. How long the cistern will take to become full when both the pipes are working?

25) Two taps A and B can fill a cistern in 12 min and 18 min respectively. They are turned on at the same time. If the tap A is turned off after 4 min, how long will tap B take to fill the rest of the cistern?

26) Two taps can fill a tank in 12 and 18 min respectively. Both are kept open for 2 min and the first is turned off. In how many min more will the tank be filled?

Details about Workshop

Subject :	Arduino Programming & IoT
How it will be useful to students	Arduino is an open-source electronics platform based on easy-to-use hardware and software. Arduino boards are able to read inputs - light on a sensor, a finger on a button, or a Twitter message - and turn it into an output- activating a motor, turning on an LED, publishing something online. You can tell your board what to do by sending a set of instructions to the microcontroller on the board. To do so you use the Arduino programming language (based on Wiring), and the Arduino Software (IDE), based on Processing.
What Skill will be developed :	Programming Skill will be developed. They will read data from board, on sensor. Understand the concept behind smart cities, smart wearable's & smart switches. Attended will be capable of designing any application by integrating multidisciplinary concepts and can understand all the process of smart products like smart switches, smart watches, smart meters etc.
Branch :	Electronics & Telecommunication

Report

On date 23rd to 25th August, 2019 EXTC department of PRPCEM organized three days' workshop on "Arduino and Sensor Interfacing with Introduction to IoT". Workshop was conducted by two experts Mahendra Randive, Assistant Professor at Electronics Department, PRPCEM College and Aniket Pawade, Assistant Professor at Electronics Department, PRPCEM College. 40 students from 3rd Year EXTC branch took part in this workshop. Main focus of the workshop was to do hands on practical with Arduino uno board. Arduino is an open source development board used by developers and hobbyist for creating projects and prototypes. Arduino has vast collection of supporting libraries developed by open source users across the world. Learning this platform might help students in rapid prototype development their project.

Keeping these facts in mind content of workshop was designed and delivered. In the first session students got familiar with various development boards of Arduino and learnt the development environment for Arduino. Working with Arduino I/O pin was taught initially and students run small practical like blinking LED, interfacing Pushbutton switch. Students learnt to interface 16x2 lcd with Arduino and displayed various data on display. Working with Analog pins was also covered in second session in which students perform analog to digital conversion and accordingly set the brightness of LED. Than Pulse Width Modulation feature was covered and students implemented fading of LED and speed control of motor. Relay concept was demonstrated by experts and students learnt to control home appliances via Arduino.

Using Bluetooth module students developed the project on home automation and also developed their own android mobile application. Using ESP 12E Shield of Arduino webserver was created and through local network demo of controlling home appliances was shown. So students learnt to implement simple practical of implementing IoT.

Overall student learnt the basics of working with Arduino and gained basic knowledge of various Arduino development boards, Programming environment, on board features of Arduino Uno: I/O, Analog, PWM, Arduino shields and IoT using Arduino. Participants will gain valuable insights into IoT. The participants learn to create end to end IoT Device solution. Feedback students was collected and it suggested that they welcomed this initiative and they are motivated to explore more dimension in this platform also they are willing to use this board in their projects in future.

The last Session on 25th August 2019 was initiated with a competition among the participants team whereby they used their entire 3 day gained knowledge to do an assigned

task in stipulated time where the team completing the given task with minimum time was declared as winner. Finally, the function was winded up by vote of thanks from Prof. S. P. Bhonge.

Workshop Report on
“Machine Learning & App. Development”

5th September 2019

Department of Electronics & Telecommunication Engineering Student Association (ETSA), ISTE & IETE student's chapter organized one day workshop on “Machine Learning & App. Development”, on 5th Sept. 2019 at DSP Lab of P. R. Pote (Patil) College of Engineering & Management, Amravati. Workshop was conducted by expert Mr. Kalpesh Beldar (CEO & Founder, Beldar Tech-Flake, Network security engineer, Google India (Mumbai)) & Amit Khachane (DSC Lead, Crowdsourc representative, Tech Speaker. Around 40 students from 3rd level EXTC branch took part in this workshop. Main focus of the workshop was to do hands on practical with Machine learning tools. There is a wide range of open source machine learning frameworks available like orange tool, Apache Singa, Amazon Machine Learning (AML) etc. in the markets, which enable machine learning engineers to build, implement and maintain machine learning systems, generate new projects and create new impactful machine learning systems.

Machine learning explores the area of algorithms, which can make high end predictions on data. In recent times, machine learning has been deployed in a wide range of computing tasks, where designing efficient algorithms and programs becomes rather difficult, such as email spam filtering, optical character recognition, search engine improvement, digital image processing, data mining, etc. workshop also focus on Android app development from scratch and design thinking including how to think of an idea, implementing it with Android Studio.

Overall student learnt the basics of working with various machine learning framework & Android app development. Feedback students was collected and it suggested that they welcomed this initiative and they are motivated to explore more dimension in this platform also they are willing to use this tools in their projects in future.

Summary:- Many students are not aware of the lucrative opportunities available in the field of Embedded Systems. Most graduates go after the popular "IT" industry to seek a good career. I think there are 2 reasons for this 1) **lack of awareness** 2) **entry barrier**. While studying most students may come across the name "Embedded Systems". Apart from that they may not be aware of -"what is an embedded system", how do they work, what knowledge and skills should be acquired to build a great career in the field of embedded systems, which companies are working in this field etc etc. If it is in the case of computer science – the industry is readily known – the lucrative IT industry. The leading companies are Microsoft, Google, Adobe (product based) and there are many smaller and medium ones. There are service based IT firms like Wipro, Infosys, Accenture, Cognizant etc. Knowledge and skills required is mainly about programming languages and technologies – like Java, Asp.net, C & C++, Python, Php etc etc.. The list goes on.

Summary:- There are a lot of opportunities for ECE graduate in IT sector. They can be much better than CSE / ITE guys because ECE guys also have low-level knowledge of computing. If we talk about opportunities, you will have equal opportunities as other guys, but provided you have extra qualities or some qualities to match them. ECE guys who have just passed out from a college have less knowledge of programming as far as I know...So if you wanna go in IT sector acquire programming knowledge...Learn C, Java, HTML, SQL, JavaScript, Jquery bla bla...according to your interest and you will be good to go. Companies look for quality of candidate.. If you are better than others there is no way you are not getting that job!

Glimps of Event:

Many of the intelligent devices are surrounding us and are increasing rapidly. Can you imagine a single person without a Smartphone and a computing device without a processor/controller? Today, most of the devices are connecting and talking to each other often referred as ubiquitous computing.

There was a huge demand for professionals, expertise in Firmware (programming the hardware) and open source technologies like Linux. Also, most of the industries prefer candidates having knowledge in multiple domains.

However, there is a shortage of talented engineers unaware of the opportunities in embedded domain moving towards IT-based MNC's and missing a demanding career in embedded systems.

Summary:-

Career paths in the IT industry can be broadly classified into the two main fields of hardware and software. Under hardware, you have manufacturing, maintenance, research and development, and management. Under software, you have manufacturing, development, programming, software testing, and maintenance and support. Among related areas are computer operations, database administration, sales/marketing, and data-centre management.

Popular job designations include computer hardware engineer, software engineer, information systems manager, programmer, network systems and data analyst, systems analyst, database administrator, systems administrator, support specialist, computer and information scientist, school/college computer teacher, and college or university professor.

Companies also advertise positions in the areas of networking, web designing, search engine optimization, computer programming, gaming, system/database administration, software testing, security, desktop support, technical writing, e-commerce, and software training. Fresher's are naturally concerned about the outlook for their industry and their career prospects. Information technology workers have been able to do relatively well even during times of recession, though, indeed, job and salary cuts have been widely reported.

Summary:-

As soon as one hears the word "Cloud Computing", above are the few common questions rise in his/her mind. Cloud Computing is a real buzzword nowadays and the most ubiquitous one. However, one doesn't need to be a technology expert to understand or have a career in it. Anyone browsing the Internet or its applications is using cloud computing.

Cloud Computing refers to the practice of using remote server or a network of remote servers hosted on the Internet to store, manage, and process data, rather than a local server or a personal computer. IBM defines Cloud Computing as "computing as a service over the Internet" that allows storing of great volumes of data, sans the possibility of losing the same. Cloud Computing can be considered as a significant tool of Information Technology (IT) that has made people's lives easier and simpler. For example, we upload, share, and store our life's precious moments in form of photos and videos. It is possible only due to the cloud technology. Cloud computing also allows us to retrieve the data anytime, anywhere at our convenience. Following points are also considered: Importance of Cloud Computing, Skills Required, Certifications & Technical Skills

Summary:- The tremendous changes in the world present both challenges and opportunities to the engineering education. Engineering students appear to be very well suited to become entrepreneurs. Economic trends and changes in the way employers organize and make decisions have led to an increased awareness of the potential value of entrepreneurship education to engineering students. In recent decades, there is a great demand for engineers who can literally build the future by developing innovative and cutting edge technologies that solve global problems and enhance the quality of life. For developing countries like India, it is necessary to promote entrepreneurship and innovation in the field of engineering education. Hence, modern engineers need to be entrepreneurial in order to understand and contribute in the context of market and business pressures. In this paper, we have presented two case studies taken up by a set of students and demonstrated how students are influenced to use entrepreneurial and innovative skills to develop software solutions for real life problems. From this study, it is observed that by introducing the concept of mini-project to solve a realistic problem, at least a couple of students can be motivated to become successful entrepreneurs in future.
